ABSTRACT OF THE DISCLOSURE

A In a communication terminal equipment and ⁱⁿ a method of
A controlling call incoming, unnecessary noises in a period from ^{the}
start of an alert sound to carrying out of the next operation can
be reduced. When a predetermined operation is effected under the
condition that an alert sound is ringing, the alert sound is
stopped or the volume of the alert sound is reduced at least over
a duration of call incoming. Thus, such a fear that persons in
the surroundings may be troubled by the continuous ringing of the
alert sound can be remarkably reduced. Further, since the
A situation that ^a power supply is cut off forcibly during call
A origination can be avoided, ^{the} ~~such a~~ fear that a person on the call
origination side may be given an unpleasant feeling can be
eliminated.
